DIXON-COLES & GAME STATE ENG DYNAMICS

- **Low-Score Covariance (rho=-0.11):** Corrects the underestimation of 0-0, 1-0, and 1-1 defensive ties.
- **ENG Markov Transition (+31.5%):** Shifts trailing 1-goal states into empty-net 2-goal puckline covers.
- **Automated Daily Faceoff Feed:** Automatically extracts confirmed starters post-skate.

SHARP DE-VIGGING & RISK DISCIPLINE

- **Power Ratio De-Vigging:** Computes true mathematical edge against sharp originating books.
- **Single Game Exposure Limit:** Total risk on any game (Side + Total) strictly capped at 4.50%.
- **Zero Side Duplication:** Takes strictly the higher risk-adjusted vehicle between ML and PL.
